10 November 1965

1. Adjustment in heating system in Headquarters Building. In a meeting with George Meloon and [REDACTED] it was determined that adjustment can be made in certain offices to more effectively control the temperature and air-flow by installation of a special thermostat at very low cost. Since we have a number of problems in senior officials' offices, [REDACTED] was directed to immediately install such thermostats in those offices where the temperature range is serious and uncomfortable.
